

Why do you need GPR on walls?

The Southeast has experienced phenomenal growth over the past few years. With this growth has come an ever-increasing demand for construction which necessitates inspection for compliance to code. Structural components such as rebar, mortar, and conduit occasionally need to be located for inspection or before cutting concrete structures to help prevent costly damage.

Benefits of GPR:

SAFE: Can be used around people and electronic devices without causing harm. Our equipment is FCC approved.

Timely: Scans can be completed during normal business hours.

Cost-effective: Radar scans can provide information on large sections of wall quickly with no damage to the wall.

Convenient: Our equipment is self-contained. Access to only one side of the wall is required for scanning.

WE HAVE THE SOLUTION TO YOUR PROBLEMS WITH BLOCK WALL INSPECTION.

Our firm specializes in locating the components contained within a concrete slab/wall through the use of a ground penetrating RADAR system (GPR) specifically designed for evaluating concrete structures with none of the problems associated with traditional concrete x-ray.

Ground Penetrating Radar is a non-destructive evaluation technique used to accurately determine the precise location of potential hazards contained within the concrete.

Making a Radar survey of a cinderblock wall...

What we can detect:

- Rebar
- Wire Mesh
- Post Tension Cables
- Conduit (Galvanized and PVC)
- Presence of mortar (grout)

What we can evaluate:

- Concrete Walls
- Elevated Slabs
- Structural Walls
- Slabs-on-Grade
- Concrete Roof

What we have to offer:

- Prompt response to job requests throughout the southeast.
- Rates typically lower than those of the local x-ray firms.
- Ability to survey the entire wall, rather than a small section .
- Friendly and knowledgeable technicians
- Free quotes and demonstrations
- We guarantee that if we arrive at your site and we cannot find a suitable signal we will not charge for our service.

We take great pride in our reputation and would like an opportunity to demonstrate what we can do for your firm.

If your firm would like a free quote on the cost of our service feel free to call

(770) 569-1111

Radargram of cinderblock wall. "A" shows open cells, "B" is rebar set in mortar.

Why Xenogenesis, LLC?

Xenogenesis, LLC has been working throughout the Southeast, with offices in the Atlanta, Georgia and Huntsville, Alabama areas. We have performed our RADAR services on a wide variety of projects throughout the Southeast with great success. In the Atlanta area we have made wall x-ray almost obsolete with our safer, more accurate service.
